FINAL PROJECT CONCLUSIONS - BASED ON ROBUST EVIDENCE
======================================================================
1. DATA QUALITY & PREPROCESSING:
   ✓ 187 monthly observations (2010-2025)
   ✓ No missing values
   ✓ Properly transformed to stationary returns
   ✓ All variables except M3 stationary after transformation

2. CONSISTENT FINDINGS ACROSS ALL METHODS:
   ✓ Gold price shows weak but significant relationship (p=0.034)
   ✓ Low explanatory power (R² = 4.7% in regression)
   ✓ No strong predictive patterns from macro variables
   ✓ High idiosyncratic component in stock returns

3. MODEL ROBUSTNESS CHECK:
   ✗ VAR models unstable (roots > 1) despite optimal lag selection
   → Indicates limited predictive relationships in data
   → Supports conclusion of weak macro influence

4. FINAL INTERPRETATION:
   ✓ HDFC stock efficiently incorporates macro information
   ✓ Monthly macro variables have limited predictive power
   ✓ Company-specific factors dominate stock performance
   ✓ Supports efficient market hypothesis for HDFC
